JFET als Verstärker

Dienstag, 18. Mai 2021

RG; hoch ohmiger Widerstand (~100kl) danit dos

Gate-potential of Masse ist.

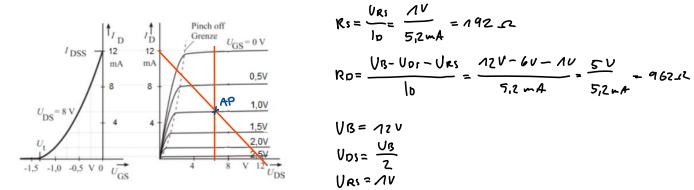

Ra | Viber den Source widerstand

wird Source über Gate

gehoben und ein negatives

UGS entsteht

Arbeits punkt einstellung:

$$Rs = \frac{U_{Rs}}{I_{D}} = \frac{\Lambda V}{5,2mA} = 192.2$$

$$RD = \frac{U_{R} - U_{D1} - U_{RS}}{I_{D}} = \frac{12V - 6v - \Lambda v}{5,2mA} = \frac{5V}{5,2mA} = 962.6$$

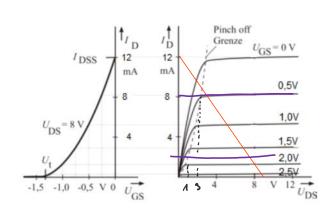

$$VB = 12V$$

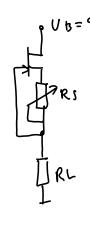

$$VDS = \frac{UB}{2}$$

$$VRS = 1V$$

Aulgabe:

Essoll eine Konstantstromquelle mit 1 = 2 ... 8 mA realisiert werden.

$$8mA: R5 = \frac{0.5V}{8mA} = 62.15 \Omega$$

$$2mA: R5 = \frac{1.75}{2mA} = 875 \Omega$$

$$8mA: RL max = \frac{9V - 1.75V - 0.75V}{2mA} = 3.2 \times \Omega$$

$$2mA: RL max = \frac{9V - 0.5V}{2mA} = 3.2 \times \Omega$$
